“ We needed to implement an ISO 14001 system that focussed on our issues. Our business processes are simple and we have great management in place. We used Spedan to help us design a system that we could really benefit from. They also integrated the Environmental work with our Quality systems, which makes life even simpler for us now ”

David Weekes, JJS Electronics

ENVIRONMENTAL MANAGEMENT

ISO 14001:2015 is an internationally recognised and trusted standard for Environmental Management. Meeting the criteria of the Standard confirms your commitment to a continual improvement process for environmental performance as well as compliance with legislation.

BENEFITS OF ISO 14001

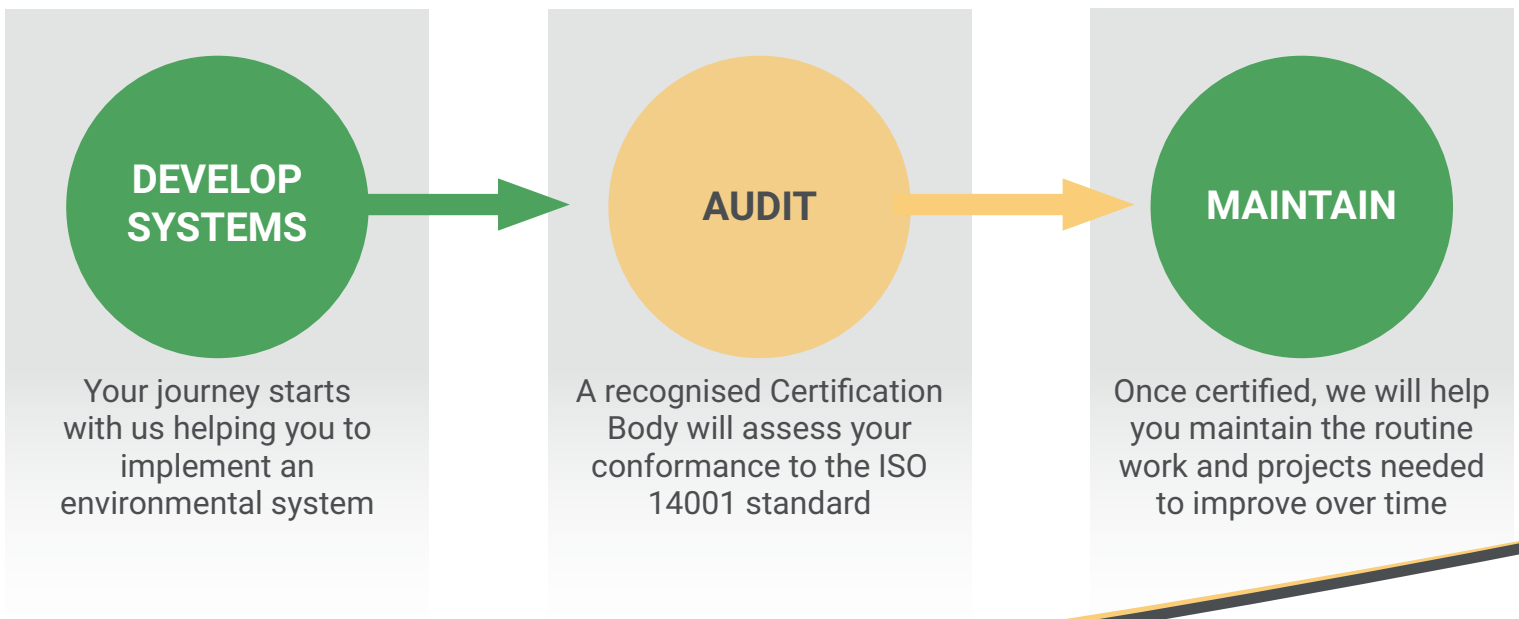

ISO 14001 provides a practical framework for managing your environmental issues; the standard focuses you on ensuring that your risks and legal compliance are covered, before moving you on to improving your performance in areas that will benefit your business and the environment the most.

Effective use of the standard significantly helps your organisation by embedding a culture of challenge and continual improvement.

- **Confidence that your Organisation knows and meets it's legislative requirements**
- **The ability to demonstrate your environmental credentials to Customers and Stakeholders**
- **A governance framework to manage and enhance environmental performance into the future**
- **A system to maximise environmental opportunities relevant to your business**

HOW TO GET AN ISO 14001 CERTIFICATE

Once you have setup your environmental management system you will need an independent certification body to audit your system and award your ISO 14001 Certificate. We are recognised consultants by the market-leading UKAS accredited Certification Bodies, BSi and NQA.

GAP ANALYSIS

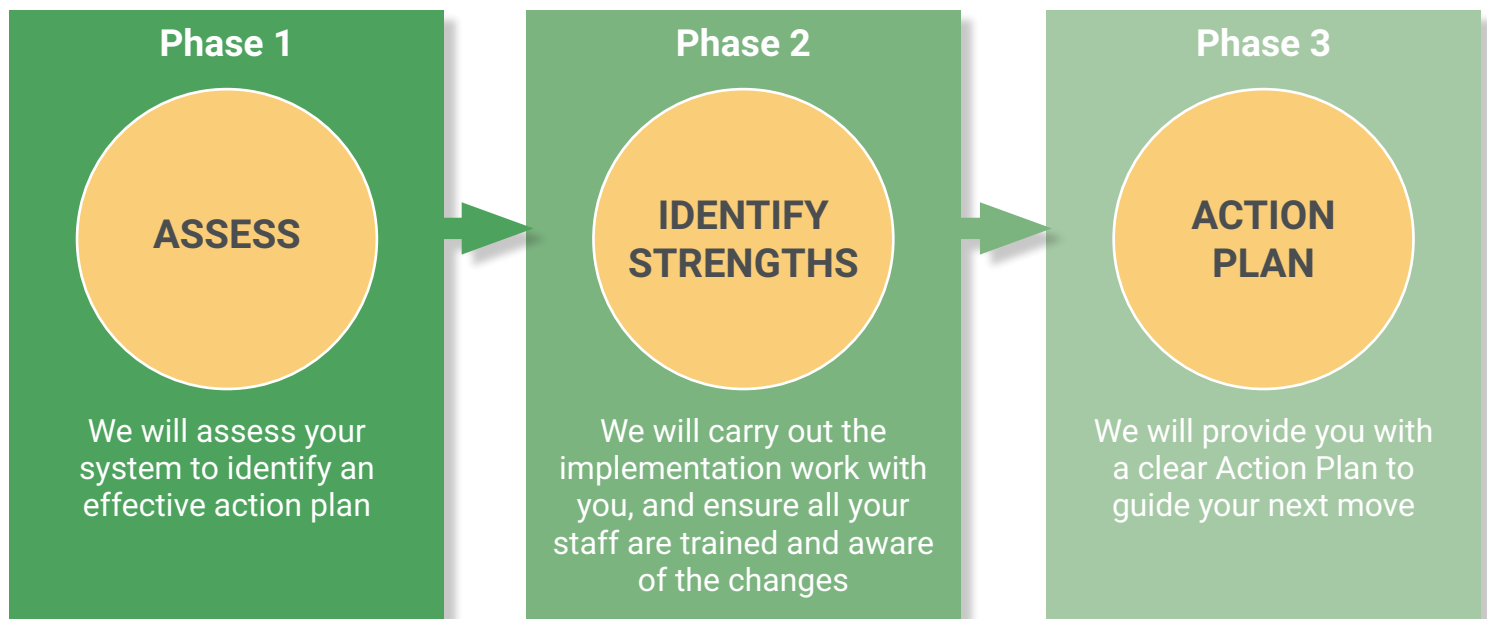

If you need to set up a management system, we can help you to plan your project. Our Gap Analysis will identify exactly what you need to do and ensure that you focus your resources correctly. Perfect if you are aiming to do the work yourself, or carrying out a feasibility study!

Our experience with ISO 14001 shows that most businesses are unaware of the legal issues and necessary management practices that are needed to ensure good environmental performance.

Even fewer will have explored the opportunities open to them to improve environmental performance to gain a competitive advantage.

We will review your existing management practices to identify where these meet the requirements of ISO 14001:2015. We will be able to identify what you need to develop and implement to meet the full requirements, and create an effective action plan for you to follow.

Your Gap Analysis will follow a bespoke programme covering all aspects of your business, including the Management and operational processes, suppliers, customers and your staff.

Benefits of a Gap Analysis

- Provides clarity on your legal requirements
- Provides a clear and prioritised action plan to start developing your Management System
- Introduces you to the requirements and benefits of good environmental management
- Identifies how the environmental requirements could be integrated with your Quality systems

IMPLEMENTATION

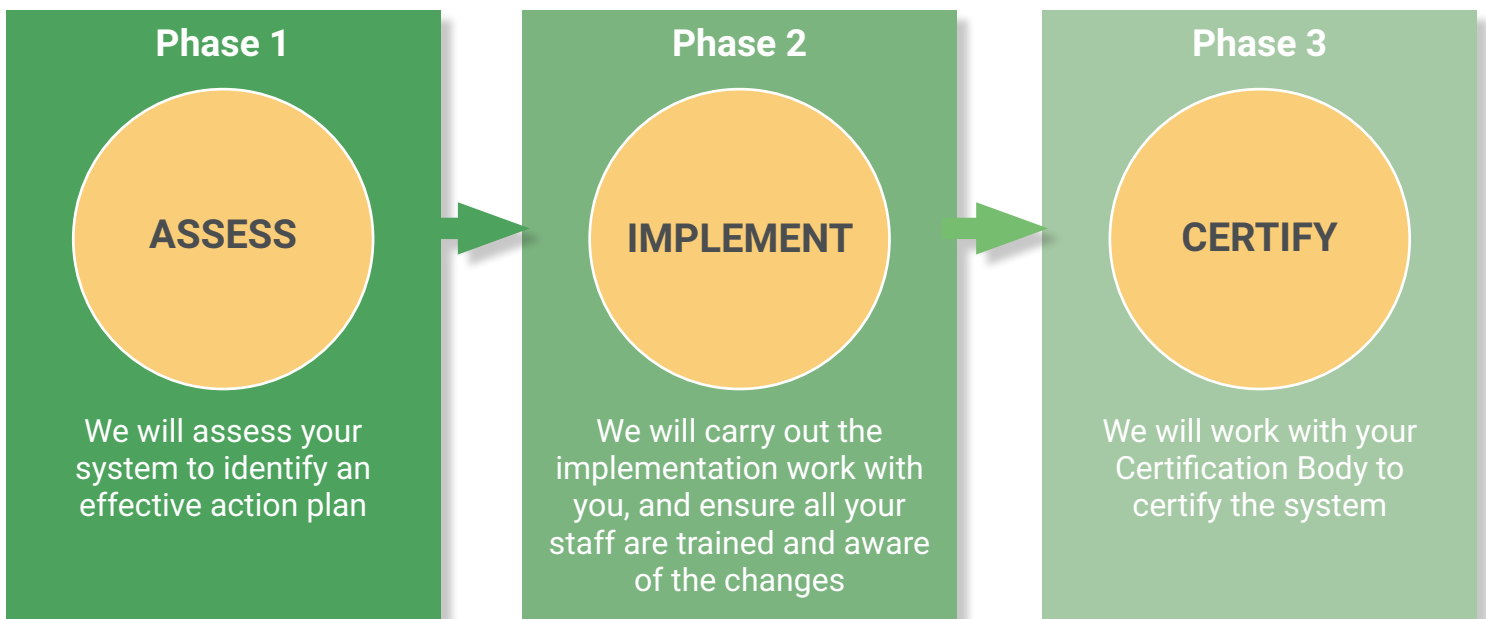

We will support you from the very beginning of your journey to implement an ISO 14001 environmental management system, through the process of certification and ongoing surveillance. Use our experience to make the process easy and beneficial for your business.

We will take you through the full process of setting up an environmental management system, onwards to having the system Certified, and then maintaining the system into the future. We will work with you to understand your business and ensure your environmental system fits your business and your goals.

Our experience shows that many businesses are exposed to legal requirements, and either don't manage the issues adequately and if they do, don't record or document necessary records. Therefore, our approach ensures that existing good practice is captured and built on in your new environmental management system.

Depending on the level of support that you need, most implementations will take between 3 and 6 months to achieve certification. Of course, if you need things faster, we can usually facilitate this, but let's talk it through.

Benefits of a Spedan Implementation

- Wide range of experience in setting up new systems
- 100% pass rate in all new Management System Certifications
- Business focussed systems that bring tangible benefits
- Full training and support

TRANSITION TO ISO 14001:2015

Transition to the new ISO 14001:2015 standard need not be as daunting as you imagine. With many Clients already through the process, we have gained extensive experience to help you transition smoothly and effectively.

We will assess your existing management system and identify good practice that can be carried forward into the new system. We will work with your management team to develop the key areas of 'Context', Risks and Opportunities. We will then use that content to help shape an effective management system.

All our experience shows that organisations have benefitted considerably from the new ISO 14001:2015 system as it highlights the key opportunities and issues that need addressing, with more clarity and focus than ever before.

Benefits of a Spedan Transition

- 100% pass rate of transitions to the new standard
- We have transitioned Clients since the standard was introduced
- Full training and support
- Results show a business Focussed environmental management system

MAINTAIN YOUR SYSTEM

If you have a system in place, but need additional resource to ensure that it is effective and kept up to date, we can support you. Our bespoke maintenance plans are designed to ensure that you maintain the key activities of the system and ensure it adds value to your business.

We will work with you to identify routine actions such as internal audit and management review to ensure your management system is operating as you expect it to; efficiently and effectively!

On top of that, we also carry out a full review of your operations against legislation to ensure that you are meeting your compliance requirements.

We will collate your requirements and build an effective action plan to put in place the appropriate decisions and actions you make in relation to your effective environmental management system.

Depending on the level of support you want, we can action and monitor the projects that need to take place. We can support any external audits that are made on your business; whether from a Customer or a Certification Body.

Benefits of having Spedan maintaining your system

- Bespoke maintenance programmes
- Effective internal audits and business focussed management reviews
- 100% success rate on Surveillance and Recertification Audits
- Full training and support
